## WHAT IS CLAIMED IS:

5

10

15

- 1. An organic polymer gel obtained by polymerizing a monomer comprising an ionic surfactant moiety and a polymerizable organic counter ion in the presence of a cross-linking agent at or above the surfactant's critical micelle concentration.
- 2. The organic polymer gel of claim 1 which has a micelle structure having inwardly oriented hydrophobic groups of the surfactant and an outer shell of polymerized organic counter ions bound to the hydrophilic groups of the surfactant.
- 3. The organic polymer gel of claim 1, wherein the ionic surfactant is a cationic surfactant selected from halogenated and ethylsulfated alkyltrimethylammonium.
- 4. The organic polymer gel of claim 3, wherein the alkyl is C<sub>7-40</sub> alkyl.
- 5. The organic polymer gel of claim 3, wherein the monomer is selected alkyltrimethylammonium from the group consisting of 20 alkyltrimethylammonium (met)acrylate, alkyltrimethylammonium vinylacetate, alkyltrimethylammonium vinylbenzoate, alkyltrimethylammonium vinylphosphonate, alkyltrimethylammonium vinylsulfonate, vinylbenzenesulfonate, alkyltrimethylammonium alkyltriethylammonium alkyltriethylammonium alkyltriethylammonium 25 (met)acrylate, vinylacetate, alkyltriethylammonium vinylbenzoate, alkyltriethylammonium vinylphosphonate, alkyltriethylammonium vinylsulfonate and alkyltriethylammonium vinylbenzenesulfonate.
- of the organic polymer gel of claim 5, wherein the monomer is selected from the group consisting of decyltrimethylammonium acrylate, decyltrimethylammonium (met)acrylate, decyltrimethylammonium vinylacetate, decyltrimethylammonium vinylbenzoate,

WO 2004/013208 PCT/KR2003/000414

- 23 -

decyltrimethylammonium vinylphosphonate, decyltrimethylammonium decyltrimethylammonium vinylsulfonate, vinylbenzenesulfonate. decyltriethylammonium acrylate, decyltriethylammonium (met)acrylate. decyltriethylammonium vinylacetate, decyltriethylammonium vinylbenzoate, decyltriethylammonium vinylphosphonate, decyltriethylammonium vinylsulfonate, decyltriethylammonium vinylbenzenesulfonate, cetyltrimethylammonium acrylate, cetyltrimethylammonium (met)acrylate, cetyltrimethylammonium vinylacetate, cetyltrimethylammonium vinylbenzoate, cetyltrimethylammonium cetyltrimethylammonium vinylphosphonate, viriylsulfonate, cetyltrimethylam monium vinylbenzenesulfornate, 10 cetyltriethylammonium acrylate, cetyltriethylammonium (met)acrylate, cetyltriethylammonium vinylacetate, cetyltriethylammonium vinylbenzoate, cetyltriethylammonium vinylphosphonate, cetyltriethylammonium vinylsulfonate and cetyltriethylammonium vinylbenzenesulfonate.

5

- The organic polymer gel of claim 1, wherein the ionic surfactant is an 7. anionic surfactant having an anionic group of -COO<sup>-</sup>, -SO<sub>3</sub><sup>-</sup>, -OSO<sub>3</sub><sup>-2</sup> or -PO<sub>3</sub><sup>-2</sup>.
- The organic polymer gel of claim 7, wherein the monomer is selected 8. consisting of the vinylpyridinium alkylcarboxylate, from group 20 vinylpyridinium vinylpyridinium alkylbenzoate, alkylsulfonate, vinylpyridinium benzenesulfonate, vinylpyridinium alkylphosphonate, allyltrimethylammonium alkylcarboxylate, allyltriethylammonium alkylcarboxylate, allyltrimethylammonium alkylsulfonate, allyltriethylammonium alkylsulfonate, allyltrimethylammonium 25 alkylphosphonate and allyltriethylammonium alkylphosphonate.
  - 9. The organic polymer gel of claim 8, wherein the alkyl is  $C_{7-40}$  alkyl.
- The organic polymer gel of claim 1, wherein the polymerizable group 10. 30 contained in the polymerizable organic counter ion is a vinyl or ethoxy group.
  - 11. The organic polymer gel of claim 1, wherein the cross-linking agent is

WO 2004/013208 PCT/KR2003/000414

a compound having at least two double bonds.

5

15

30

- 12. The organic polymer gel of claim 11, wherein the cross-linking agent is selected from the group consisting of methylenebisacrylamide (MBA), divinylbenzene, trimethylolpropane ethoxylate (1/3EO/OH) methylether diacylate (TPE-1), trimethylolpropane ethoxylate (7/3EO/OH) methylether diacylate (TPE-7), trimethylolpropane ethoxylate (14/3EO/OH) methylether diacylate (TPE-14), trimethylolpropane and a mixture thereof.
- 13. The organic polymer gel of claim 1, wherein the cross-linking agent is added in an amount of 0.01 to 5 mol based on a mol of the monomer.
  - 14. The organic polymer gel of claim 1, wherein the polymerization is carried out at room temperature to  $100^{\circ}$ C for 2 to 12 hours.
  - 15. A method for separating an ionic or water-soluble material from a solution containing the ionic or water-soluble material using the organic polymer gel of any one of claims 1 to 14.
- 16. The method of claim 15, wherein the ionic material is a dye selected from the group consisting of methyl orange, methyl red, methyl green, rhodamine B and methyl violet.
- 17. The method of claim 15, wherein the water-soluble material is bromocresol purple or phenol red.
  - 18. An inorganic polymer gel obtained by condensation polymerization of a surfactant and an inorganic compound having a reactive group which is condensible with the surfactant at or above the surfactant's critical micelle concentration.
  - 19. The inorganic polymer gel of claim 18, wherein the surfactant is a cationic surfactant selected from halogenated and ethylsulfated

## alkyltrimethylammonium.

- 20. The inorganic polymer ge1 of claim 19, wherein the alkyl is  $C_{7-40}$  alkyl.
- The inorganic polymer gel of claim 18, wherein the surfactant is an anionic surfactant having an anionic group of -COO, -SO<sub>3</sub>, -OSO<sub>3</sub><sup>-2</sup> or -PO<sub>3</sub><sup>-2</sup>.
- 22. The inorganic polymer gel of claim 18, wherein the inorganic compound is selected from the group consisting of tetramethylorthosilicate, tetraethylorthosilicate, titanium tetraethoxide, aluminum isopropoxide, trimethylborate, chlorodimethylalkylsilane and sodium silicate.
  - 23. The inorganic polymer gel of claim 18, wherein the condensation polymerization is carried out at O to  $120\,^{\circ}$ C for 0.1 to 100 hours.
- 24. The inorganic polymer gel of claim 18, wherein the surfactant is added in an amount of 0.05 to 0.5 mole based on a mole of the inorganic compound.
- 25. A method for separating an ionic or water-soluble material from a solution containing the ionic or water-soluble material using the inorganic polymer gel of any one of claims 18 to 24.
- 26. The method of claim 25, wherein the ionic material is selected a dye from the group consisting of methyl orange, methyl red, methyl green, rhodamine B and methyl violet.
  - 27. The method of claim 25, wherein the water-soluble material is bromocresol purple or phenol red.
